Speaker Overview

Tom Honeyands (University of Newcastle)

Associate Professor Tom Honeyands is Director of the Iron Ore Hub, and co-Director of the Centre for Ironmaking Materials Research. He is a metallurgical specialist with more than 30 years' experience in consulting, research and process engineering. In his current role, he is responsible for leading the Hub, and for research in the end-use of iron ores in iron and steelmaking.

Presentation: "Hydrogen Ironmaking - Lessons From The Past And Challenges For The Future".

Hydrogen reduction of iron ores is very topical at present, with lots of national and international interest in the production of "green steel", but it is not a new idea. BHP operated the FINMET direct reduced iron plant in Port Hedland from 1999 to 2004, which utilised hydrogen from reformed natural gas. This talk will cover learnings from the FINMET operation, current research into use of hydrogen in the blast furnace and some of the challenges for corrosion specialists. This presentation will be of interest to engineers, asset owners, industry associates & applicators and we encourage all our members to join us either online or in-person for this exciting lecture.
